Power Maths calculation policy, KS1

The following pages show the *Power Maths* progression in calculation (addition, subtraction, multiplication and division) and how this works in line with the National Curriculum. The consistent use of the CPA (concrete, pictorial, abstract) approach across *Power Maths* helps children develop mastery across all the operations in an efficient and reliable way. This policy shows how these methods develop children's confidence in their understanding of both written and mental methods.

KEY STAGE 1

Children develop the core ideas that underpin all calculation. They begin by connecting calculation with counting on and counting back, but they should learn that understanding wholes and parts will enable them to calculate efficiently and accurately, and with greater flexibility. They learn how to use an understanding of 10s and 1s to develop their calculation strategies, especially in addition and subtraction.

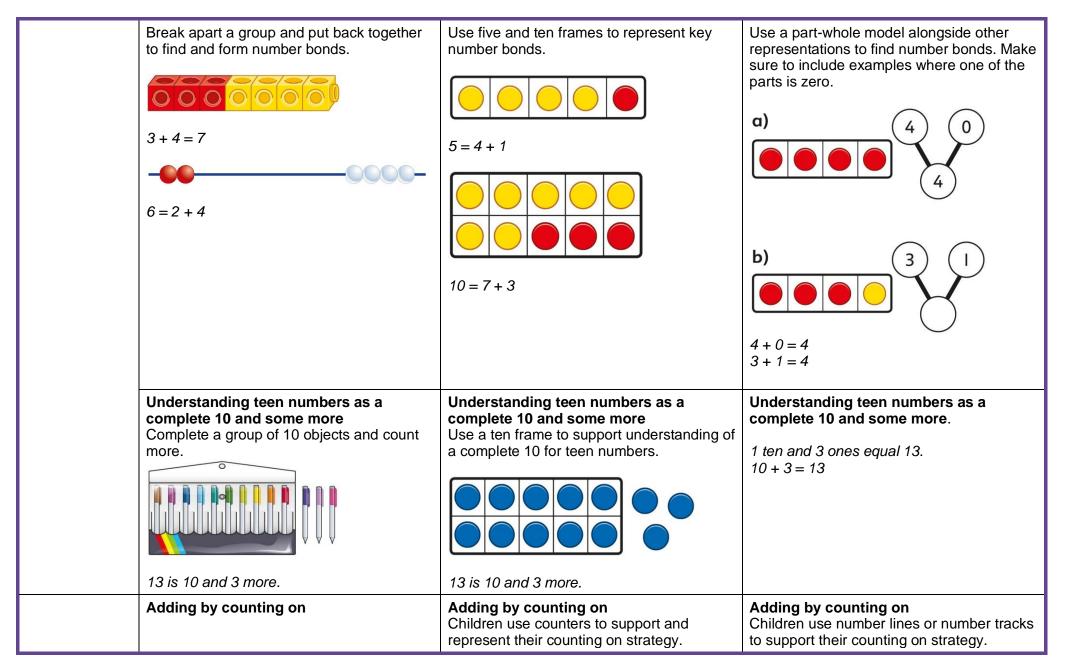

Key language: whole, part, ones, ten, tens, number bond, add, addition, plus, total, altogether, subtract, subtraction, find the difference, take away, minus, less, more, group, share, equal, equals, is equal to, groups, equal groups, times, multiply, multiplied by, divide, share, shared equally, times-table

		-			
Addition and subtraction: Children first learn to connect addition and subtraction with counting, but they soon develop two very important skills: an understanding of parts and wholes, and an understanding of unitising 10s, to develop efficient and effective calculation strategies based on known number bonds and an increasing awareness of place value. Addition and subtraction are taught in a way that is interlinked to highlight the link between the two operations. A key idea is that children will select methods and approaches based on their number sense. For example, in Year 1, when faced with $15 - 3$ and 15 - 13, they will adapt their ways of approaching the calculation appropriately. The teaching should always emphasise the importance of mathematical thinking to ensure accuracy and flexibility of approach, and the importance of using known number facts to harness their recall of bonds within 20 to support both addition and subtraction methods. In Year 2, they will start to see calculations presented in a column format, although this is not expected to be formalised until KS2. We show the column method in Year 2 as an option; teachers may not wish to include it until Year 3.	Multiplication and division: Children develop an awareness of equal groups and link this with counting in equal steps, starting with 2s, 5s and 10s. In Year 2, they learn to connect the language of equal groups with the mathematical symbols for multiplication and division. They learn how multiplication and division can be related to repeated addition and repeated subtraction to find the answer to the calculation. In this key stage, it is vital that children explore and experience a variety of strong images and manipulative representations of equal groups, including concrete experiences as well as abstract calculations. Children begin to recall some key multiplication facts, including doubles, and an understanding of the 2, 5 and 10 times-tables and how they are related to counting.	Fractions: In Year 1, children encounter halves and quarters, and link this with their understanding of sharing. They experience key spatial representations of these fractions, and learn to recognise examples and non-examples, based on their awareness of equal parts of a whole. In Year 2, they develop an awareness of unit fractions and experience non-unit fractions, and they learn to write them and read them in the common format of numerator and denominator.			
	Year 1				

Power Maths © Pearson 2019

	Concrete	Pictorial	Abstract
Year 1 Addition	Counting and adding more Children add one more person or object to a group to find one more.	Counting and adding more Children add one more cube or counter to a group to represent one more.	Counting and adding more Use a number line to understand how to link counting on with finding one more.
			one more 0 1 2 3 4 5 6 7 8 9 10
		One more than 4 is 5.	One more than 6 is 7. 7 is one more than 6.
			Learn to link counting on with adding more than one. 0 1 2 3 4 5 6 7 8 9 10 5 + 3 = 8
	Understanding part-part-whole relationship Sort people and objects into parts and understand the relationship with the whole.	Understanding part-part-whole relationship Children draw to represent the parts and understand the relationship with the whole.	Understanding part-part-whole relationship Use a part-whole model to represent the numbers.
			6 + 4 = 10
	The parts are 2 and 4. The whole is 6.	The parts are 1 and 5. The whole is 6.	6 + 4 = 10
	Knowing and finding number bonds within 10	Knowing and finding number bonds within 10	Knowing and finding number bonds within 10

Subtraction	Children arrange objects and remove to find	Children draw and cross out or use	Children count back to take away and use a
	how many are left.	counters to represent objects from a problem.	number line or number track to support the method.
			876
	1 less than 6 is 5. 6 subtract 1 is 5.	9 –	
		There are 🦳 children left.	9 - 3 = 6
	Finding a missing part, given a whole and a part	Finding a missing part, given a whole and a part	Finding a missing part, given a whole and a part
	Children separate a whole into parts and understand how one part can be found by subtraction.	Children represent a whole and a part and understand how to find the missing part by subtraction.	Children use a part-whole model to support the subtraction to find a missing part.
	$\downarrow \qquad \downarrow$		7 - 3 = ?
			Children develop an understanding of the relationship between addition and subtraction facts in a part-whole model.
		5 – 4 =	
	8 - 5 = ?		
	Finding the difference	Finding the difference	Finding the difference

Arrange two groups so that the difference between the groups can be worked out.	Represent objects using sketches or counters to support finding the difference.	Children understand 'find the difference' as subtraction.
Image: Second	5 - 4 = 1 The difference between 5 and 4 is 1.	$\begin{array}{c} & & & \\ \hline & & & \\ 0 & 1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 & 9 & 10 \\ 10 - 4 = 6 \\ The difference between 10 and 6 is 4. \end{array}$
The difference between 8 and 6 is 2.		
Subtraction within 20 Understand when and how to subtract 1s efficiently.	Subtraction within 20 Understand when and how to subtract 1s efficiently.	Subtraction within 20 Understand how to use knowledge of bonds within 10 to subtract efficiently.
Use a bead string to subtract 1s efficiently.	$ \begin{array}{c} $	5 - 3 = 2 15 - 3 = 12
5 - 3 = 2 15 - 3 = 12	5 - 3 = 2 15 - 3 = 12	
Subtracting 10s and 1s For example: 18 – 12	Subtracting 10s and 1s For example: 18 – 12	Subtracting 10s and 1s Use a part-whole model to support the calculation.
Subtract 12 by first subtracting the 10, then the remaining 2.	Use ten frames to represent the efficient method of subtracting 12.	
		$ \begin{array}{c} (10) & (4) \\ 19 - 14 \\ 19 - 10 = 9 \\ 0 & 1 = 5 \end{array} $
 First subtract the 10, then take away 2.	First subtract the 10, then subtract 2.	9 - 4 = 5 So, 19 - 14 = 5
Subtraction bridging 10 using number bonds	Subtraction bridging 10 using number bonds	Subtraction bridging 10 using number bonds

	For example: 12 – 7 Arrange objects into a 10 and some 1s, then decide on how to split the 7 into parts.	Represent the use of bonds using ten frames. For 13 – 5, I take away 3 to make 10, then take away 2 to make 8.	Use a number line and a part-whole model to support the method. 13-5 5 6 7 8 9 10 11 12 13
Year 1 Multiplication	Recognising and making equal groups Children arrange objects in equal and unequal groups and understand how to recognise whether they are equal. A B C Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure Image: Complex structure	Recognising and making equal groups Children draw and represent equal and unequal groups.	Describe equal groups using words <i>Three equal groups of 4.</i> <i>Four equal groups of 3.</i>
	Finding the total of equal groups by counting in 2s, 5s and 10s Image: Second system	Finding the total of equal groups by counting in 2s, 5s and 10s 100 squares and ten frames support counting in 2s, 5s and 10s. 100 = 23, 5s = 24, 5s = 24	Finding the total of equal groups by counting in 2s, 5s and 10s Use a number line to support repeated addition through counting in 2s, 5s and 10s. 10 10 10 10 10 0 10 20 30 40 50
Year 1 Division	Grouping	Grouping Represent a whole and work out how many equal groups.	Grouping Children may relate this to counting back in steps of 2, 5 or 10.

and find how certain size Sort a whole equal groups There are 10	C children altogether. in each group.	There are 10 in total. There are 5 in each group. There are 2 groups.	
work out how	of objects into equal parts and w many are in each part.	Sharing Sketch or draw to represent sharing into equal parts. This may be related to fractions. Image: Second state of the second state of	Sharing 10 shared into 2 equal groups gives 5 in each group.

	Year 2		
	Concrete	Pictorial	Abstract
Year 2 Addition			
Understanding 10s and 1s	Group objects into 10s and 1s.	Understand 10s and 1s equipment, and link with visual representations on ten frames.	Represent numbers on a place value grid, using equipment or numerals. Tens 0 3 2 Tens 0 4
Adding 10s	Use known bonds and unitising to add 10s. ())) ()) ()) ()) ()) ()) ()) ()) ()) ()	Use known bonds and unitising to add 10s. $ \begin{array}{c} \bullet & \bullet \\ \bullet &$	Use known bonds and unitising to add 10s. 7 4 3 4 + 3 = 1 4 + 3 = 7 $4 \tan 3 = 7$ $4 \tan 3 = 7$
Adding a 1-digit number	Add the 1s to find the total. Use known bonds within 10.	Add the 1s.	Add the 1s.

to a 2-digit number not bridging a 10	41 is 4 tens and 1 one. 41 add 6 ones is 4 tens and 7 ones. This can also be done in a place value grid.	+ + + + + + + + + + + + + + + + + + +	Understand the link between counting on and using known number facts. Children should be encouraged to use known number bonds to improve efficiency and accuracy. $30 \ 31 \ 32 \ 33 \ 34 \ 35 \ 36 \ 37 \ 38 \ 39 \ 40$ This can be represented horizontally or vertically. 34 + 5 = 39 or $\frac{T}{3} \ 0 \ 4 \ 5 \ 9$
Adding a 1-digit number to a 2-digit number bridging 10	Complete a 10 using number bonds. + + + + + + + + + + + + + + + + + + +	Complete a 10 using number bonds.	Complete a 10 using number bonds. 7 5 2 $+5$ $+2$ 43 44 45 46 47 48 49 50 51 52 53 $7 = 5 + 2$ $45 + 5 + 2 = 52$
Adding a 1-digit number to a 2-digit	Exchange 10 ones for 1 ten.	Exchange 10 ones for 1 ten.	Exchange 10 ones for 1 ten.

number using exchange			$ \begin{array}{c} T \\ \hline $
Adding a multiple of 10 to a 2-digit number	Add the 10s and then recombine. Add the 10s and then recombine. 27 is 2 tens and 7 ones. 50 is 5 tens. There are 7 tens in total and 7 ones. So, 27 + 50 is 7 tens and 7 ones.	Add the 10s and then recombine. Add the 10s and then recombine. 4 + 4 + 4 + 4 + 4 + 4 + 4 + 4 + 4 + 4 +	Add the 10s and then recombine. 37 + 20 = ? 30 + 20 = 50 50 + 7 = 57 37 + 20 = 57
Adding a multiple of 10 to a 2-digit	Add the 10s using a place value grid to support.	Add the 10s using a place value grid to support.	Add the 10s represented vertically. Children must understand how the method relates to unitising of 10s and place value.

number using columns	T O Image: Constraint of the state of the	T O Image: Constraint of the system Image: Constraint of the system 16 is 1 ten and 6 ones. Then subtract the 10s. $\frac{T}{4} \frac{O}{4} \frac{O}{5}$$-\frac{2}{2} \frac{7}{7}$$\frac{T}{3} \frac{O}{3} \frac{1}{4} \frac{1}{5}$$-\frac{2}{2} \frac{7}{7}$$\frac{T}{8} \frac{O}{3} \frac{1}{4} \frac{1}{5}$$-\frac{2}{7} \frac{7}{8} \frac{1}{8}$</th>	Using column subtraction, exchange 1 ten for 10 ones. Then subtract the 1s. Then subtract the 10s. $\frac{T}{4} \frac{O}{4} \frac{O}{5}$ $-\frac{2}{2} \frac{7}{7}$ $\frac{T}{3} \frac{O}{3} \frac{1}{4} \frac{1}{5}$ $-\frac{2}{2} \frac{7}{7}$ $\frac{T}{8} \frac{O}{3} \frac{1}{4} \frac{1}{5}$ $-\frac{2}{7} \frac{7}{8} \frac{1}{8}$
Year 2 Multiplication			

Equal groups and repeated addition	Recognise equal groups and write as repeated addition and as multiplication.	Recognise equal groups using standard objects such as counters and write as repeated addition and multiplication.	Use a number line and write as repeated addition and as multiplication. $\begin{array}{c} & & \\$
Using arrays to represent multiplication and support understanding	Understand the relationship between arrays, multiplication and repeated addition.	Understand the relationship between arrays, multiplication and repeated addition.	Understand the relationship between arrays, multiplication and repeated addition. 10 5 10 15 20 25 5 5 5 5 5 5 5 5
Understanding commutativity	Use arrays to visualise commutativity.	Form arrays using counters to visualise commutativity. Rotate the array to show that orientation does not change the multiplication. This is 2 groups of 6 and also 6 groups of 2.	Use arrays to visualise commutativity. 4+4+4+4+4=20 5+5+5+5=20 $4 \times 5=20$ and $5 \times 4=20$
Learning ×2, ×5 and ×10 table facts	Develop an understanding of how to unitise groups of 2, 5 and 10 and learn corresponding times-table facts.	Understand how to relate counting in unitised groups and repeated addition with knowing key times-table facts.	Understand how the times-tables increase and contain patterns.

Sharing equally	Start with a whole and share into equal parts, one at a time.	Represent the objects shared into equal parts using a bar model.	Use a bar model to support understanding of the division.
	••••••••••••••••••••••••••••••••••••	O shared into 5 equal parts. There are 4 in each parts.	18 18 ÷ 2 = 9
Grouping	They get 5 each.Understand how to make equal groups from	Understand the relationship between	Understand how to relate division by
equally	a whole.	grouping and the division statements.	grouping to repeated subtraction.

	Image: Second Structure Image: Second Structure <th>$\begin{array}{c} 12 \div 3 = 4 \\ 12 \div 4 = 3 \\ 12 \div 6 = 2 \\ 12 \div 2 = 6 \\ \hline \end{array}$</th> <th>There are 4 groups. $12 \div 3 = 4$ There are 4 groups.</th>	$ \begin{array}{c} 12 \div 3 = 4 \\ 12 \div 4 = 3 \\ 12 \div 6 = 2 \\ 12 \div 2 = 6 \\ \hline \end{array} $	There are 4 groups. $12 \div 3 = 4$ There are 4 groups.
Using known times-tables to solve divisions	Understand the relationship between multiplication facts and division.	Link equal grouping with repeated subtraction and known times-table facts to support division. 40 divided by 4 is 10. Use a bar model to support understanding of the link between times-table knowledge and division.	Relate times-table knowledge directly to division. $I \times I0 = I0$ $2 \times I0 = 20$ $3 \times I0 = 30$ $4 \times I0 = 40$ $5 \times I0 = 50$ $6 \times I0 = 60$ $7 \times I0 = 70$ $8 \times I0 = 80$ I know that 3 groups of 10 makes 30, so I know that 30 divided by 10 is 3. $3 \times 10 = 30$ so $30 \div 10 = 3$
